*Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 and 14-20 are, drawn to an apparatus comprising a membrane, classified in class 428, subclass 428.
- II. Claims 6-13, drawn to an apparatus comprising a gas source, classified in class 355, subclass 53.
- III. Claims 21-29, drawn to method of forming a membrane using electroplating, classified in class 204, subclass 242.
- IV. Claims 30-31, drawn to method of organic coating, classified in class 156.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the mask could be used in a different process such as one that does not require the pressurizing with gas on one side of the membrane.

Inventions I and III, IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different

Art Unit: 1756

product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process could be used to make a materially different product such as any type of coated membrane.

Inventions II and III, IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are different methods of making and using a membrane mesh, including an apparatus with a frame support, electroplating to form a beam structure, and coating with an organic polymer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search required for Group I is not required for Group II, and their recognized divergent subject matter restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
